CONDITIONS OF RELEASE

General

1. This Naval Engineering Standard (NES) has been prepared for the use of the Crown and of its contractors in the execution of contracts for the Crown and, subject to the Unfair Contract Terms Act 1977, the Crown will not be liable in anyway whatever where the Standard is used for any other purpose.
2. This document is Crown Copyright and the information therein may be subject to Crown or third party rights. It is not to be released, reproduced or published without written permission of the MOD.
3. The Crown reserves the right to amend or modify the contents of this NES without consulting or informing any holder.
4. This NES may call for the use of processes, substances and procedures that may be injurious to health if adequate precautions are not taken. It refers only to technical suitability and in no way absolves either the supplier or the user from statutory obligations relating to health and safety at any stage of manufacture or use.
5. Where attention is drawn to hazards, those quoted may not necessarily be exhaustive.

MOD Tender or Contract Process

6. This NES is the property of the Crown and unless otherwise authorized in writing by the MOD must be returned on completion of the contract, or submission of the tender, in connection with which it is issued.
7. When this NES is used in connection with a tender or contract, the user is to ensure that he is in possession of the appropriate version of each document, including related documents, relevant to each particular tender or contract.

INTRODUCTION

1. This Naval Engineering Standard (NES) is sponsored by the Procurement Executive, Ministry of Defence, Director General Submarines (DGSM), Section ME312. The Point of Contact for Weapon Systems and Equipment is DGSM, Section SM832.
2. It is to be applied as required by any Ministry of Defence contract for the selection of small electrical fittings and components and is applicable to:
 - a. Surface Ships and Submarines.
 - b. Ship Systems and Equipment and Weapon Systems and Equipment.
3. If it is found to be unsuitable for any particular requirement the Sponsor is to be informed in writing with a copy to Director General Surface Ships (DGSS), NA145 for Ship Systems and Equipment or DGSM, SM832 for Weapon Systems and Equipment.
4. Any user of this NES either within MOD or in industry may propose an amendment to it. Proposals for amendments that are not directly applicable to a particular contract are to be made to the Sponsor of the NES, and those directly applicable to a particular contract are to be dealt with using existing procedures or as specified in the contract.
5. No alteration is to be made to this NES except by the issue of an authorized amendment.
6. Unless otherwise stated reference in this NES to approval, approved, authorized or similar terms, means by the Ministry of Defence in writing.
7. Any significant amendments that may be made to this NES at a later date will be indicated by a vertical sideline. Deletions will be indicated by 000 appearing at the end of the line intervals.
8. When NES are incorporated into contracts users are responsible for their correct application and for complying with contract and any statutory requirements. Compliance with an NES does not of itself confer immunity from legal obligations.
9. This NES has been reissued because of deletion of obsolete equipment, new terminology for appropriation of equipment and rationalization of contents.

1. SCOPE

- 0101 This NES gives details of small electrical fittings and components in common use for electrical power distribution and allied systems in Surface Ships and Submarines. This list includes switches, plugs and sockets, noise makers, lights – indicating, residual current device (RCD) and junction boxes. The items listed are shown as 'current' and 'obsolescent' and selection for use is to be made in accordance with the definitions given in Section 3. The list is not comprehensive and may not include some fittings found in older ships.
- 0102 This NES applies to new design Surface Ships and Submarines, also alterations and additions or refitting of existing vessels.
- 0103 This NES applies to equipment sponsored by the Procurement Executive, Ministry of Defence and supplied by either the Ministry of Defence or the Contractor.

3. DEFINITIONS

0301 For the purpose of this NES the following definitions apply.

CURRENT Items of electrical equipment which are applicable to new design and construction requirements.

OBSOLESCENT Items of electrical equipment which are NOT applicable to new design and construction requirements but will continue to be provisioned for fleet support.

NOTE

For new design and construction requirements use is only to be made of CURRENT items and/or the commercial alternatives listed in NES 541.

**NOTES REGARDING THE SELECTION AND RATINGS ALLOCATED
TO MOD APPROVED ROTARY SWITCHES**

RATINGS

THE MAXIMUM RATINGS ALLOCATED TO EACH TYPE OF ROTARY SWITCH, UNLESS OTHERWISE STATED ARE BASED ON A RATING & ENDURANCE TEST OF 15,000 OPERATIONS (ONE OPERATION BEING ONE MAKE AND BREAK). SWITCHES USED AT THESE RATINGS AND IN CIRCUITS HAVING THE CHARACTERISTICS STATED WILL STILL BE USABLE AFTER 15,000 OPERATIONS, BUT THE CONTACTS MAY BE APPROACHING THE END OF THEIR USEFUL LIFE. THE RATINGS MAY BE USED AS THE BASIS FOR SELECTING SWITCHES FOR FITTING WHERE SPACE LIMITATIONS REQUIRE THE SMALLEST POSSIBLE SWITCH, OR WHERE THE SERVICE MAKES IT CERTAIN THAT IT WILL BE MANY YEARS BEFORE 15,000 OPERATIONS AT THE RATED FIGURE WILL OCCUR, IN ALL OTHER CASES IT IS RECOMMENDED THAT RATINGS NOT EXCEEDING 0.75 OF THE LISTED VALUES BE USED IN SELECTING SWITCHES.

SHOCK

PROVIDED THAT THE ROTARY SWITCHES ARE CORRECTLY MOUNTED THEY WILL BE MECHANICALLY SHOCKPROOF, WITH MOST SWITCHES DISTURBANCE OF THE MADE ELECTRICAL CONTACTS WILL OCCUR DURING THE PERIOD OF SHOCK, MOUNTING DETAILS AND THE TIME OF CONTACT DISTURBANCE DURING SHOCK ARE GIVEN ON THE APPROPRIATE PAGE FOR EACH PARTICULAR SWITCH.

VOLTAGE

WHILST ALL ROTARY SWITCHES LISTED MEET THE REQUIREMENTS OF THE STANDARD WITHSTAND VOLTAGE AND INSULATION RESISTANCE TESTS OF NES 511 UNDER LABORATORY CONDITIONS, MOST OF THEM DO NOT HAVE THE CLEARANCE IN AIR AND CREEPAGE PATH DISTANCES SPECIFIED IN NES 609. THEREFORE IT IS ESSENTIAL TO ENSURE THAT THE SWITCHES ARE MOUNTED IN A POSITION FREE OF OR PROTECTED FROM THE INGRESS OF GREASE, DIRT AND MOISTURE, PARTICULARLY WHEN THEY ARE USED AT HIGHER VOLTAGES.

ROTARY PACKET SWITCH R.A.C. TYPE ARROW P2 (CURRENT)

DESCRIPTION - Rotary switch, 2 or 4 position, quick make and break.

For operating voltages and currents see table below.

FIXING - Front - 2 x M4 Bolts, Rear - 2 x M4 Bolts

WEIGHT - Varies with dimension L (see table)

TERMINALS - 3 BA saddle clamps

REPLACEMENT SPARES - Complete switch

MAGNETIC CLASSIFICATION - Category C

- Notes**
1. The handle shaft length is suitable for panel thicknesses to 8.7mm.
 2. Shock requirements will be met on all lengths L (up to 15 cells) when the switch is mounted by the front support only.
 3. No contact disturbance occurs during shock or vibration.

Notes

- (1) These switches are non-magnetic and may be fitted in equipment for M.C.M. Vessels without magnetic modification or compensation. (Certificate of Magnetic Measurement No 3078)
- (2) The switches are of the slow make and break type and shall normally be used in ac circuits only. The dc ratings are included as a guide should it be necessary to select non-magnetic switches for use in non-inductive dc circuits. They should not be used in inductive dc circuits
- (3) In order to meet shock requirements all switches regardless of the number of mouldings must be supported at both front and rear ends. Both supports must be attached to a common rigid structure.
- (4) Maximum time of contact disturbance during shock of the "made" contacts is as follows:-

SWITCH TYPE	CONTACT DISTURBANCE MILLISECONDS MAX
A30	12
C30	20
C65	12

Malfunction of the open contacts does not occur

- (5) To prevent damage to the switches by through fault currents they must be protected by fuses of the lowest practical rating compatible with the duty which the switch has to perform. The maximum cut-off current of the fuses used in relation to the prospective short-circuit current, must not exceed the values stated below:-

CIRCUIT CHARACTERISTIC	MAX PERMISSIBLE FUSE PARAMETER	
PROSPECTIVE SHORT CIRCUIT CURRENT IN kA rms	CUT-OFF CURRENT IN kA * USING SWITCH:-

- (6) a. Blue line switches when used in ambient temperatures exceeding 35°C(95°F) and are required to carry their full load current for a period exceeding 20 mins, have to be derated. The percentage of derating which is required under such conditions is obtained from the chart below:-
- b. The maximum ambient temperature Blue line switches may be used in continuously is 71°C(160°F)

ROTARY PACKET SWITCH, SANTON TYPE C6H --/SK239 'MODIFIED' (CURRENT)

DESCRIPTION - Rotary switch 2, 3 or 4 position, 1 to 6 pole quick make or break;

NOTE: To meet MOD requirements, extra locating pips are required on the fixed contacts of this switch. In order to ensure that this feature is incorporated the suffix code SK239 should be added to the basic rotary switch reference number as shown above.

FIXING - 2 x M6 Bolts

WEIGHT - Varies with Dimension X (Refer to current Santon catalogue for details).

TERMINALS - 7mm dia hole (see Note 2)

REPLACEMENT SPARE - Complete switch

MAGNETIC CLASSIFICATION - Category C

- Notes
1. The length of handle shaft is suitable for panel thicknesses up to 4mm max.
 2. All switches are supplied less terminal clamps, nuts, washers and screws. These items supplied to special order only.
 3. Switches having more than 4 poles must be mounted on a common rigid support front and rear.
 4. No contact disturbance occurs during shock or vibration

LIMIT SWITCH (CURRENT)

NSN 5930-99-435-6212, NS Cat No 0567/435-6212, Formerly AP 18161
DESCRIPTION - Limit switch, SIGMA Ltd. 'Snaplock', lever operated, 220V dc, 2 amp, 440V ac, 5 amp, Single Pole Change Over Silver contacts, self-wiping. Aluminium alloy enclosure.

GA DRAWING - DEE D24217
PROJECTION - 61mm
FIXING - 4 x M6 Bolts
WEIGHT - 0.9kg
WATERTIGHT - IP66
GLANDS - 1 x size 3 to SEE 125
TERMINALS - 4 x 2 BA x 9.5mm Connection Headed Screws
CABLES - max diam 16mm
REPLACEMENT SPARES - None

MAGNETIC CLASSIFICATION - Category C

INSTALLATION NOTES - One fixing bracket if sufficiently rigid or e.g. two L-shaped brackets. Spring washers are required.

REMARKS - The return spring in the back of the switch may be transferred to bias the operating lever, either clockwise or counter-clockwise or may be removed entirely to provide non-automatic resetting.
 The standard lever provided is 38mm centres. Torque required to operate, 1.6Nm with return spring and 0.6Nm without return spring.
 Travel to trip switch (X) 10.5° and to reset 10.5°
 Over travel (Y) 6°
 Safety travel (Z) 22.5° either way
 The arm has 48 serrations (7.5° adjustment)
 A high temperature, oil-proof version of the above Switch is available under NSN 5930-99-533-2126 (Class Gp 0567), SDN 007 003 531, for use in main propulsion gearboxes.

INSTALLATION NOTES - Page 72 shows typical methods of mounting on hinged and sliding doors. Woodwork should be protected from bruising by the plunger by fitting a small striking plate e.g. 25mm x 25mm x 3mm brass.

REPLACEMENT SPARES - Switch NS Cat No 0567/435-6232

REMARKS - The two switches are manufactured from common components which may be assembled as either left hand or right hand versions. The covers are not interchangeable.
Only the switch and terminal portion are watertight.
Travel to operate 4.8mm Force 36/35 N.
Overtravel 6.3mm Force 44/53N
Compensation for wear or subsequent distortion is provided by means of the slotted top fixing foot and clamp plant +6.3mm adjustment in 1.6mm steps is provided. A chained pin is provided for locking 'ON'.

COMPONENTS - Clamping plate NS Cat No 0567/460-5354

- Notes (1) A series of Type 128 Connectors has been introduced for Naval use. The full series of these Connectors is detailed in Specification BS 9522 F0024 but the shell material for shipboard use in the Royal Navy must be of Limited Fire Hazard (LFH) material.
- (2) This section lists the introduced Connectors with brief details of each type. To ensure that only LFH types are used in HM Ships, any new requirement is to be referred IN THE FIRST INSTANCE to DGSM ME312. Also to ensure that only connectors in LFH material are obtained, all purchases until further notice are to be made from ICORE International Ltd, Leigh Road, Slough, Berks SL1 4BB.
- (3) Ingress Protection rating IP68

SERIES SPD.T.128.

CODIFICATION FOR SERIES SPD.T. ELECTRICAL CONNECTORS

SPD All part numbers are pre-fixed with these three digits to denote the Series/Range, SPD.

T Denotes Multi-start thread.

22-2 In the case of any connector assembly, the first three digits are followed by the contact arrangement or planform required. The first two digits of this code denote the shell size, i.e. 22 = Shell Size 22. Note the second digit, or pair of digits, denote the lay-out selected which, as can be seen by reference to the tables or lay-out sheets, DO NOT denote the number of contacts in the lay-out.

S Socket - an assembly with socket (female) contacts.

or

P Plug - an assembly with plug (male) contacts.

X Fixed, panel mounted connector/assembly/receptacle - always male threaded.

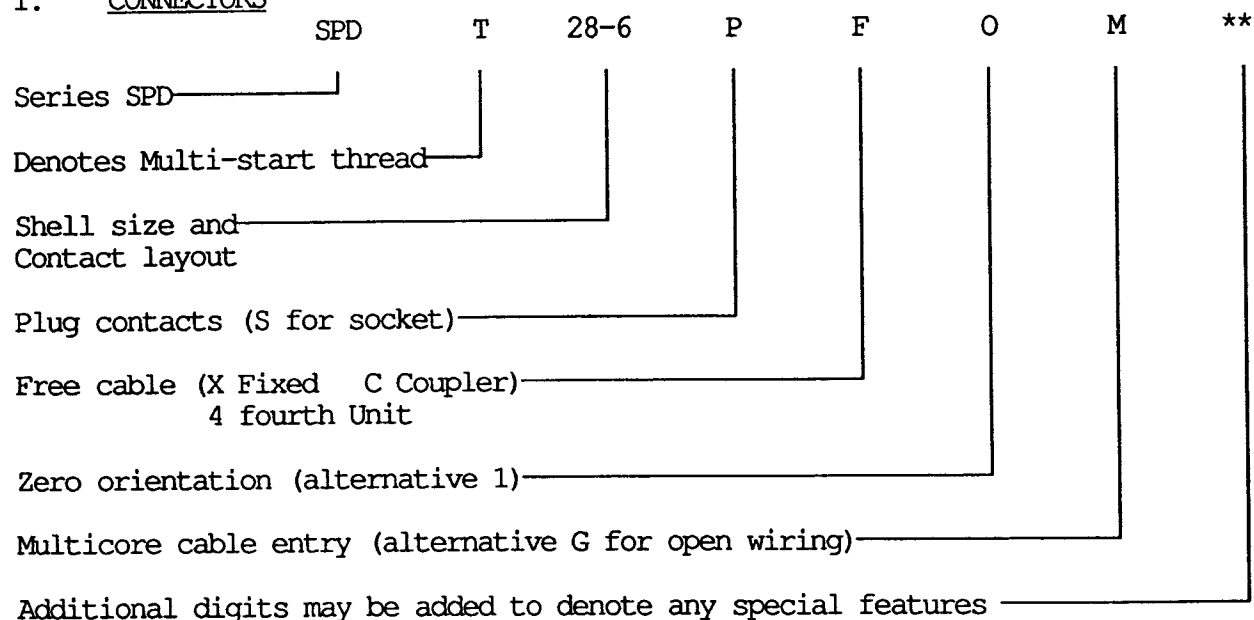

or

F Free, i.e. cable connector assembly - always female threaded with coupling nut.

- C Coupler, i.e. an in-line cable connector - always male threaded for coupling the length of free cable, and always with socket contacts.
- or
- 4 Fourth unit, i.e. fixed panel mounted connector/assembly - always pin and female threaded.
- 0 Orientation - all connectors are supplied in zero orientation - denoted by '0'. Alternative orientations are available denoted by '1'.
- 1 Orientation to obviate cross connection of similar circuits is achieved by an alternate inner shell with a totally different arrangement of key-ways.
- Note The insert and contacts are not rotated to an alternate position as is the more common practice in many other connector ranges.
- M or G This group of code digits provides the selected termination at the rear of the connector assembly.
- M Multicore Cable Entry - this fitting ensures and fulfils two purposes -
(i) it compresses and seals the individual conductors (by a grommet) and
(ii) seals the multicore cable within the range specified in the tables.
- G Grommet Seal - a fitting design for open-wiring, i.e. sealing individual conductor cables.
- Note An M or G fitting must be supplied with a free, or coupler connector. A fixed panel mounting can be supplied with or without rear fittings, e.g., an SXOG assembly would be a socket, fixed, '0' orientation connector but with the additional provision to seal the individual conductor buckets and cables at the rear - ideal when making an installation within open trunking. In all cases, the panel unit is a sealed assembly.

CODIFICATION EXAMPLES

1. CONNECTORS

SPD T 22-14 SXOG (See Page 115 for plan form)

This codification would provide an SPD connector, shell size 22, 19 socket contacts in a fixed panel mounted shell, zero orientation with individual conductor sealing for 'open wiring'.

SPD T 18-21 SCOM (See Page 115 for plan form)

Provides - an SPD connector, shell size 18, 3 socket contacts in an in-line coupler shell, zero orientation with multicore cable entry and sealing.

2. PROTECTIVE CAPS can be provided for all connector assemblies.

CONTACT ARRANGEMENTS AND IDENTIFICATIONS

THE RANGE

The range is based on four shell sizes -18, 22, 28 and 36 - with the outside diameters of the coupling nuts at 52.0mm., 58.0mm., 70.0mm. and 80mm respectively.

Five sizes of contacts are specified in a range of lay-outs, as tabulated.

AP 18077 SERIES SWITCH SOCKETS (5amp) (OBSOLESCE)

DESCRIPTION - Switch-Socket various voltages,
(See Page 212) up to 230V AC/ 220V DC,
5 amp, DP. inter-locking switch. Al
alloy case. Glands for 2 twin or 4
single cables, with provision for
looping. WT 0.4bar, with plug or blank
plug fitted, 3 contacts including 1 earth.

WEIGHT - 0.7kg

PROJECTION - 81mm

COMPONENTS:

- NS Cat No 0413/10497 Toroidal sealing ring
- NS Cat No 0568/924-3669 Blank plug complete
with chain, fixing rings & 'O' ring seal.
- NS Cat No 0567/435-6211 Socket moulding &
contact assembly.
- NS Cat No 0559/460-5342 Gasket, rubber for
cover.
- NS Cat No 0567/914-3338 Switch, toggle, QM-QB
250V, 6A, DP.
- NS Cat No 0413/923-7730 Toroidal sealing ring
for shaft.

INSTALLATION NOTES -

- Care is to be taken when fitting the cover
to avoid trapping the flexible leads between
the socket assembly and base, and to ensure
that the earth connection from the cover to
the base is secure.
- Smear plug and blank plug O-rings with
silicon grease (suitable is
Cat No 0474/942-4829)

REMARKS -

- The blank plug is to be inserted when the
switch socket is not in use.
- This series of switched sockets and plugs are
all generally similar in design with common components for maintenance.
- Non-interchangeability between the various patterns is achieved by varying
the disposition of the lugs on the plugs and corresponding slots in the
switched sockets.
- The switch and socket assembly is mounted on the cover and connected to a
fixed terminal block and the case with three flexible leads, one of which is
for earth. This allows removal of the cover and switch socket assembly for
maintenance.
- These items have been miniaturized and space for ship's wiring cut down to
the minimum. There is to be no slack wiring between the glands and
terminal blocks.

NSN 5925-99-549-1608, NS Cat No 0564/549-1608

DESCRIPTION - 40 amp, 440V, 3 phase (3 of 4 wire) Trip Rating 30mA.

40 amp, 240V, 1 phase, Double Wound, Trip Rating 15mA.

PROJECTION - 86mm

FIXING - Slots on vertical centre line suitable for M4 screws 100mm apart.

WATERTIGHT - N.W.T.

TERMINALS - Capacity 16 sq mm

MAGNETIC CLASSIFICATION - None

SPECIAL NOTE Modified commercial unit NOT SHOCKPROOF. For Shipboard use must be resiliently mounted in an enclosure.

MANUFACTURERS' REF - WES 40/4 With NATO Label.

Notes 1. This RCD is trip free, ie contacts will open if device is closed onto a circuit with an earth fault present.

2. The RCD is fitted with an internal test resistor suitable for use on 440V also 240V when double wound.

3. When used on 240V 1 phase connect as follows to 'DOUBLE WIND'

Line in the top terminal 3
Link bottom terminal 3 to top terminal 2.
Line out to bottom terminal 2.
Neutral in to top terminal N.
Link bottom terminal N to top terminal 1.
Neutral out to bottom terminal 1.

Contract Requirements

When Defence Standards are incorporated into contracts users are responsible for their correct application and for complying with contractual and statutory requirements. Compliance with a Defence Standard does not in itself confer immunity from legal obligations.

Revision of Defence Standards

Defence Standards are revised as necessary by up issue or amendment. It is important that users of Defence Standards should ascertain that they are in possession of the latest issue or amendment. Information on all Defence Standards is contained in Def Stan 00-00 Standards for Defence Part 3, Index of Standards for Defence Procurement Section 4 'Index of Defence Standards and Defence Specifications' published annually and supplemented regularly by Standards in Defence News (SID News). Any person who, when making use of a Defence Standard encounters an inaccuracy or ambiguity is requested to notify the Directorate of Standardization (DStan) without delay in order that the matter may be investigated and appropriate action taken.
